

Design Manager (m/f/d)

Hardware and software design

We are a market-leading medium-sized company geared towards international growth and have positioned ourselves as a leading system provider in the field of retrofitting production systems and high-quality industrial robot technology.

To strengthen our team, we are looking for a full-time (40 hours/week) design manager (m/f/d) in the field of hardware and software as soon as possible.

Your tasks:

- Recording of list of tasks based on specifications and design discussions with our customers
- Creation of the design specifications for the hardware, software and production departments
- You are responsible for monitoring the implementation in the hardware, software and production departments
- You organise the standardisation of the work results in order to deploy them in follow-up projects
- Management of department heads

Your profile:

- You have completed training as a technician or have studied electrical engineering with experience in automation technology/electrical engineering
- Very good knowledge of EPLAN P8 software to check the work results
- Also good knowledge of Siemens S7 and F-Control, WinCC, WinCC-flexible, TIA Portal, Simotion and Sinamics
- You have a good knowledge of English, an independent, structured way of working and a willingness to travel (domestic and abroad)

We offer you:

- An attractive salary
- Motivated team and co-operative working atmosphere
- Modern workplace
- Special payments such as holiday and Christmas bonuses
- Flexible working time arrangements

Please send a short application (cover letter and detailed CV) by e-mail. We request the complete application folder individually after personal consultation with you.

All applications are treated with absolute discretion!
