

Hardware designer (m/f/d)

We are a market-leading medium-sized company geared towards international growth and have positioned ourselves as a leading system provider in the field of retrofitting production systems and high-quality industrial robot technology.

To strengthen our team, we are looking for a full-time (40 hours/week) hardware designer (m/f/d) to start as soon as possible.

Your tasks:

- Hardware construction and documentation of circuit diagrams, control cabinet planning and project planning in the press business
- Amending, updating and creating circuit diagrams
- Implementation of internal and external agreements
- Interface between production and planning

Your profile:

- Completed training as a technician (male/female/diverse) in an electrical profession or practitioner (m/f/d) with experience in the field of automation technology/electronics
- Practical experience with bus systems such as Profibus-DP, MPI and Ethernet
- Very good program knowledge SPS, S7, WinCC and WinCC flexible
- Good knowledge of English
- Independent and structured way of working
- Willingness to travel (domestic and abroad)

We offer you:

- An attractive salary
- Motivated team and co-operative working atmosphere
- Modern workplace
- Special payments such as holiday and Christmas bonuses
- Flexible working time arrangements

Please send a short application (cover letter and detailed CV) by e-mail. We request the complete application folder individually after personal consultation with you.

All applications are treated with absolute discretion!
