

Software developer (m/f/d)

We are a market-leading medium-sized company geared towards international growth and have positioned ourselves as a leading system provider in the field of retrofitting production systems and high-quality industrial robot technology.

To strengthen our team, we are looking for a full-time (40 hours/week) software developer (m/f/d) as soon as possible.

Your tasks:

- Independent development of PLC and industrial robot programs for the specific automation solutions of our customers
- Optimization and further development of existing and newly-developed programs
- Development and application of visualizations and user interfaces
- Commissioning of the controls and training of the operating personnel

Your profile:

- Completed training as a technician (m/f/d) in an electrical profession or practitioner (m/f/d) with experience in the field of automation technology/electronics
- Practical experience with bus systems such as Profibus-DP, MPI and Ethernet
- Very good program knowledge SPS, S7, WinCC and WinCC flexible
- Good knowledge of English
- Independent and structured way of working
- Willingness to travel (domestic and abroad)

We offer you:

- An attractive salary
- Motivated team and co-operative working atmosphere
- Modern workplace
- Special payments such as holiday and Christmas bonuses
- Flexible working time arrangements

Please send a short application (cover letter and detailed CV) by e-mail. We request the complete application folder individually after personal consultation with you.

All applications are treated with absolute discretion!
